Elseco builds a next-generation global insurance platform to boost productivity

Elseco builds a next-generation global insurance platform to boost productivity

For competitive advantage, Elseco decided to build the ATOM insurtech next-generation technology platform with SAP as co-innovation partner. For agility, cybersecurity and cost benefits moving to the cloud was vital. A hybrid Managed Cloud Service for Elseco was designed as a high availability environment with no single point of failure. A cloud node in Germany forms the production facility, supported by a disaster recovery site in the UK. They are securely connected over the Tata Communications Tier-1 network.

A Tata Communications project team supervised the implementation. It exactly met ambitious Elseco deadlines, assuring achievement of the ATOM insurtech launch date. Tata Communications helps Elseco maintain a lean IT team able to concentrate on core commercial capabilities. The Tata Communication Solutions in Europe offers direct peering with 600-plus Internet service providers from over 50 countries. Using centres of excellence like Germany and the UK reassures global customers on the security of their data. Optimal low latency and cyber security assure the resilience of the company's online presence while assuring regulatory compliance.
