

Solution: IZO™ Private Cloud

# Infor modernises applications at pace thanks to a fully managed hybrid cloud platform

# Infor modernises applications at pace thanks to a fully managed hybrid cloud platform

Tal Apparel, one of the world’s largest clothing manufacturers, relies on Infor software to drive mission-critical manufacturing and financial functions, but its in-house IBM AS/400 computers were creating bottlenecks with frequent downtime.

Tata Communications was chosen by Infor because it could offer the latest AS/400 mainframe computers as a cloud-based hosted service. Speed was the ultimate clincher with Tata Communications able to complete in only six weeks. The solution uses a high-performance IZO™ Cloud platform for hybrid cloud with fully managed 24/7/365 service ensuring app availability. Professional services people from Tata Communications restructured and deduped the Tal Apparel data. Supported by a global team of Tata Communications technicians, stringent SLAs are baked-in to the Tata Communications cloud architecture.

Solution: IZO™ Private Cloud

**8TB** of data uploaded

**2 data centres** for production and DR

**50% faster** time-to-implementation than nearest competitor

**Pervasive platform** for driving global growth

Tata Communications provided the state-of-the-art platform needed for future success. They’re a perfect fit with our culture, and a great partner.”
