

Solution: IZO™ Private Cloud

Khimji Randas embraces the cloud for great savings and greater flexibility

Khimji Ramdas embraces the cloud for great savings and greater flexibility

Khimji Ramdas Group contemplated an upgrade to SAP HANA, but its servers lacked the power and capacity. That could have left the company facing the huge capital cost of a data centre strip-out. Moreover, it was looking for short timelines, while ensuring a consistent customer experience. The time had come to be bold.

A cloud solution from Tata Communications proposed a IZO™ Private Cloud solution arranged across two data centres. The Tata Communications IaaS model eliminated CapEx cost and reduced TCO. Ability to scale up or down makes the business more flexible for economic swings. The cloud service is monitored 24/7/365 from the Tata Communications managed services operations centre (MSOC) in Chennai. Since the start of the Tata Communications service, no serious cyberattacks have penetrated the company's security shield.

Solution: IZO™ Private Cloud

Significant
CapEx avoidance

Twice the output
from same IT
staffing levels

Marked drop
in TCO

10 out of 10 in key
support categories

“From a technical and cultural standpoint, as well as for assured security, a cloud solution from Tata Communications came out on top. Equally importantly, the strength of the brand gave us the confidence we needed to move forward.”

Chandra Shekhar Jajware
Group CIO, Khimji Ramdas
